TranSorb®

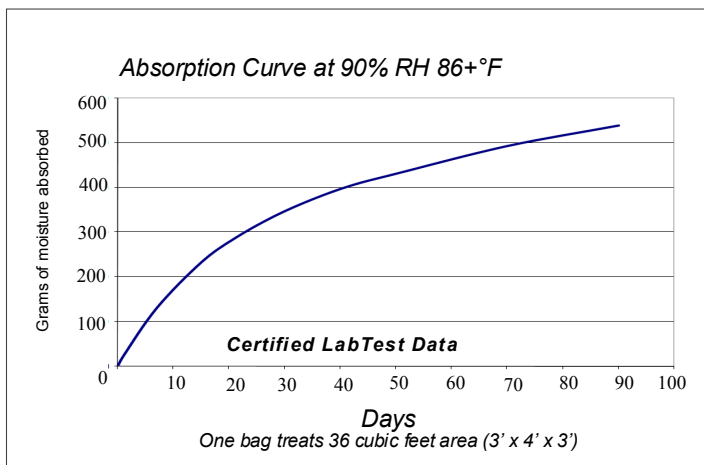

Commercial Humidifier Desiccant Pack Preserves, Prolongs & Protects Quality

Humidity is one of the top air quality offenders and attacks product quality. Unregulated moisture can lead to mold, mildew and corrosive rust all of which can create damages beyond repair. It develops in enclosed environments subject to fluctuations in temperature such as automobiles, boat cabins, RV's, cargo containers, gear bags, lockers, sheds and warehouse storage.

TranSorb® high-performing Humidity Absorber lowers dew points to create a dryer environment and eliminates moisture related problems that lead to foul odor, corrosion and mold/mildew growth. TranSorb desiccants will also absorb any pre-existing moisture within areas to be treated.

Patented MultiSorb technology captures and converts moisture into non-toxic, non-caustic dry crystals that won't drip or leach. Simply place appropriate number of desiccants in enclosed areas or under car seats and trunks to maintain ideal relative humidity for 90+ days.

Eliminates chemicals, fragrances and dangerous VOC's that attack surfaces. TranSorb is safe for transportation and can be disposed in household trash. Made in the U.S.A.

Encapsulates Over 1lb of Moisture Without Leaching
Patented sorbent helps maintain ideal relative humidity by automatically removing excess moisture from the air. To increase the duration of days, or to gain absorption volumes, place an equal amount of extra packs in area to be treated! Keep all unused desiccants air tight.

Only activates when
humidity is present

60-0702407CG01 TranSorb Desiccant, master case (32ea)

7" x 11" heat-sealed medical grade Tyvek® and film encapsulated pouch
Available in 3-pack strips with netting, or with peel & stick backing
